# F-Secure Anti-Virus for MIMEsweeper

F-Secure® Anti-Virus™ for MIMEsweeper is a powerful antivirus solution that tightly integrates with Clearswift's MAILsweeper and WEBsweeper products. With these MIMEsweeper solutions, corporations can defend themselves against such threats in e-mail traffic as spamming and hostile attacks. By integrating virus protection and disinfection with F-Secure Anti-Virus for MIMEsweeper to these solutions, you get a complete, integrated solution for policy-based content security.

Powerful Content Security

There are many options to consider when choosing an antivirus product to integrate with MIMEsweeper. These include virus detection rates, ease of integration, speed of scanning, automated updates and disinfection of viruses. Command line scanners have been the traditional way to integrate into the MIMEsweeper solutions. However, that approach tends to be slow and cumbersome. F-Secure Anti-Virus for MIMEsweeper offers tighter and simpler integration between the products and eliminates the need to queue content through a command line scanner. Furthermore, F-Secure Anti-Virus for MIMEsweeper is capable of processing multiple files at once, thus greatly increasing the speed of the solution. F-Secure Anti-Virus for MIMEsweeper also automatically incorporates the latest antivirus technology and updates, making sure viruses, worms and Trojans are effectively detected and eliminated.

KEY FEATURES

Superior Virus Detection
By combining multiple scanning engines, F-Secure Anti-Virus offers protection as if you would have several antivirus products running at the same time.

Automatic Antivirus Updates
Antivirus updates are delivered automatically in the background, so there is no need to stop and start the MIMEsweeper services.

Multi-Threaded
Messages are not queued behind each other; instead, multiple messages are scanned simultaneously, providing high performance.

Remote Administration
With F-Secure Policy Manager your administrator can easily configure, administer, update virus definition databases and collect statistics from one central location for all F-Secure Anti-Virus products.

Reporting and Alerting
Your administrator can easily monitor the network by generating extensive reports on the security status of the network. Also, alerts are sent to the central administration machine.

F-Secure

Seamless Integration

F-Secure Anti-Virus for MIMEsweeper supports the Content Scanner Scenario interface in Clearswift's MAILsweeper 4.3 or later. This interface provides a direct connection between the Clearswift MIMEsweeper product and F-Secure Anti-Virus. This technology ensures easy installation and the highest possible scanning performance.

Superior Virus Detection Rate

F-Secure Anti-Virus for MIMEsweeper detects viruses with multiple scanning engines. Each of the three engines is optimized to recognize certain types of viruses, and together they provide an unsurpassed detection rate. Also, virus definitions and updates come from one source, reducing the need to install multiple competing products that can result in system errors and long learning curves.

Fully Automated Product

With F-Secure Anti-Virus for MIMEsweeper, antivirus protection is always on and automatically updated against the latest threats. Automatic antivirus updates improve data security through added reliability and prompt delivery of critical signature files. Manual errors are eliminated, since there is no need for manual checking and downloading of databases or need to restart processes. With F-Secure's world-class antivirus update technology, the virus databases can be updated automatically on a daily basis to ensure 100% effectiveness without intervention from the administrator.

F-Secure Virus Research Organization

Antivirus products are only as good as the research and dedication behind them. That is why F-Secure Anti-Virus consistently ranks at the top when compared to competing products. Our team of dedicated virus researchers is on call 24 hours a day responding to new and emerging threats. In fact, F-Secure is one of the only companies to release daily tested virus definition updates to make sure our customers are receiving the highest quality service and protection.
