

Sophos Enterprise Manager comprises a suite of powerful tools to help system administrators manage Sophos Anti-Virus software across a wide range of platforms with the minimum of effort. It supports the automated distribution and updating of Sophos Anti-Virus from the Sophos databank, a dedicated Sophos website. It also manages and monitors Sophos Anti-Virus on local desktops and servers, and provides summary management reports on viruses detected across the organisation.

### How it works

Enterprise Manager comprises five components:

**Sophos Databank:** a website containing the latest versions of Sophos Anti-Virus and virus identity files. It ensures reliable updates by restricting use exclusively to Enterprise Manager users.

**EM Library:** collects updates from the databank at pre-set times and on-demand. It pushes them out to central installation directories (CIDs) from where desktops and servers can automatically update themselves.

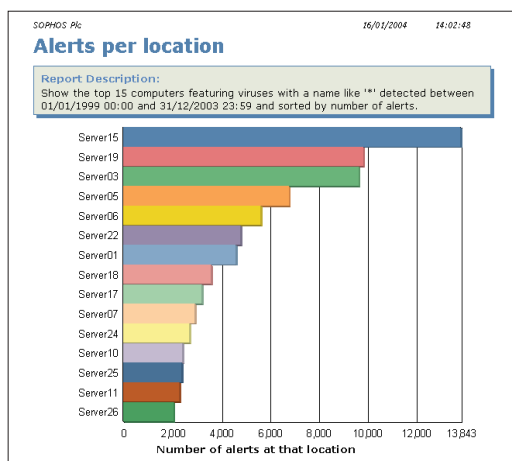

**EM Reporter:** processes and reports on viruses detected on desktops and servers. It provides four different and highly configurable summary report types which allow management or operational reports to be created quickly and easily.

**EM Console:** used to configure and manage EM Library and EM Reporter.

**SAVAdmin:** used to deploy software to all Windows desktops automatically. The software allows real-time monitoring, reporting and control.

### Features and benefits

- Offers fast and controllable, automated distribution of Sophos software enterprise-wide.
- Alerts administrators automatically when software updates have been fetched from the Sophos databank.
- Supports hierarchical redistribution of software within the organisation over internet, intranet or WAN.
- Minimises bandwidth usage.
- Updates Sophos Anti-Virus on servers and desktops across multiple platforms.
- Manages large networks by dividing computers into user-defined groups.
- Supports unattended installation of Sophos Anti-Virus across the network.
- Discovers new computers and installs Sophos Anti-Virus on them automatically.
- Ensures complete protection for remote users via Sophos Remote Update.
- Provides a networked "audit" facility for Sophos Anti-Virus with real-time monitoring of all its parameters.
- Allows displayed information to be sorted and filtered.
- Provides reports suitable for regular management reporting or daily network administration.
- Provides graphical and tabular reports on the number of viruses discovered by name, location, time or by individual alerts.
- Allows reports to be filtered and sorted to highlight viruses, computers or SAVAdmin groups of most concern.

EM Reporter can generate a number of reports

<b>Function</b>	Enterprise-wide administration and distribution of Sophos software*.
<b>EM Library</b>	
<b>System requirements</b>	Windows NT 4.0 with SP6a, Windows 2000, Windows XP Professional or Windows 2003, Microsoft Management Console (MMC) version 1.2 (which is included in Windows 2000), Internet Explorer 5.5 (SP2) or above. Disk space required: minimum 100MB. RAM required: minimum 128MB.
<b>Polling frequency</b>	Up to 24 times a day and on demand.
<b>Library-to-library connection</b>	Via URL or UNC.
<b>Sophos Anti-Virus platforms updated</b>	Windows NT/2000/XP/2003; Windows 95/98/Me; NetWare 4 or above; Mac OS 8 or above; Linux 2.2 and above; Solaris (Intel, SPARC); FreeBSD v3; HP-UX.
<b>Proxy support</b>	Yes.
<b>EM Reporter</b>	
<b>System requirements</b>	Windows NT 4.0 with SP6a, Windows 2000 with SP2 or Windows XP with SP1; Internet Explorer 5 or above. Single POP3 account. Disk space required: 250MB-2GB**. RAM required: minimum 256MB-512MB**.
<b>Client support</b>	Windows 95/98/Me; Windows NT/2000/XP/2003. Requires access to an SMTP account, either directly (NT/2000/XP/2003 only) or via a Windows Sophos InterCheck server (all clients).
<b>Database format</b>	SQL Server DE.
<b>Report viewer</b>	Crystal Reports 9, embedded in application.
<b>Report formats</b>	Tabular and graphical.
<b>Available reports</b>	Alerts by virus, per location, by time and by individual incident.
<b>Number of console connections</b>	Maximum: 5.
<b>Report export formats</b>	XLS, DOC, XML, HTML, RTE, CSV and PDF.
<b>Languages supported</b>	English, French, German, Spanish and Japanese.
<b>Multi-lingual client support</b>	Yes (localised as above).
<b>EM Console</b>	
<b>System requirements</b>	Microsoft Management Console 1.2 snap-in; runs on Windows NT/2000/XP/2003. Disk space required: 10MB (includes SAVAdmin). RAM required: minimum 64MB.
<b>SAVAdmin</b>	
<b>System requirements</b>	Windows NT/2000. Installed as part of EM Console.
<b>Supported desktops</b>	Windows 95/98/Me; Windows NT (Intel or Alpha)/2000/XP.
<b>Protocols supported</b>	All Windows-supported protocols, including TCP/IP and NetBEUI.
<b>Browsing modes</b>	Live network browsing – locates machines within active domains. Grouped network view – allowing computers and hierarchies to be logically structured, and providing information for each entry.
<b>Adding machines to group lists</b>	Drag-and-drop and copy-and-paste from the network list; import list from file.
<b>Management capabilities</b>	Real-time monitoring of Sophos Anti-Virus updates; remote installation of Sophos Anti-Virus; remote configuration of Sophos Anti-Virus (change CID, change account, alter scan settings, etc); status reporting of Sophos Anti-Virus.

\* Credentials for a 30-day evaluation can be obtained from the Sophos website. Permanent credentials to access the databank are assigned by Sophos when a licence is purchased.

\*\* Varies according to the number of alerts in the database.
