

“We have to deal with floods of data on a daily basis. Avira ensures that we work with photos – and not the likes of viruses.”

Dagmar Lasseben-Mellert, Fotofachhändlerin

The Avira SmallBusiness Suite

for medium-sized companies

Safeguard your business with ease.

www.avira.com

The Avira SmallBusiness Suite,

the virus protection and security package for small and medium-sized companies. "Free from worries" is a standard feature. Easy to install, easy administration – easy in all respects.

The all-around complete solution.

Avira SmallBusiness Suite is the ideal security solution for companies with 5 to 100 computers. Apart from your PCs and servers it also optimally protects your email and Internet communication. This is done with incredible ease. The Avira Small-Business Suite is quickly installed, configured, and – thanks to administration functions – it is easy to manage. All PCs can be centrally monitored and conveniently updated at any time with software updates. You can also benefit from a package of celebrated AntiVir security programs.

Buy one product and get eight:

The Avira SmallBusiness Suite includes everything necessary for your IT security.

- ▶ Avira AntiVir Professional (Windows/UNIX)
- ▶ Avira AntiVir Server (Windows/UNIX)
- ▶ Avira AntiVir Exchange Server incl. Avira AntiSpam
- ▶ Avira AntiVir UNIX MailGate
- ▶ Avira AntiVir UNIX WebGate
- ▶ Avira Internet Update Manager
- ▶ Avira Security Management Center (SMC)
- ▶ Avira SmallBusiness Suite Configuration Assistant

The Avira Small Business Suite is available for Windows and as a combined version for Windows and Linux/UNIX.

Optimal protection. Efficient management. Quick updates.

- ▶ A professional security package for smaller networks and an ideal supplement for companies that use, for example, the Microsoft SmallBusiness Server.
- ▶ Innovative AHeAD (Advanced Heuristic Analysis and Detection) technology for proactive security by detecting unknown or quickly changing attacks
- ▶ Avira Rootkit Detection (protection against system-manipulating processes) including repair functions
- ▶ Real time monitoring of all data access and archives with an on-access scanner as well as an on-demand scanner for manual and scheduled scans
- ▶ Archive detection with selection of the archive types to be examined and adjustable recursion depth and scanning of compressed files in real time
- ▶ Examination of email traffic in order to detect infectious content directly on the server, checks every incoming, outgoing and internally sent email in real time
- ▶ With Avira AntiVir Exchange you can identify spam emails and detect potentially dangerous content in them
- ▶ Real time monitoring of the HTTP-based Internet data traffic on the desktop with automatic blocking of phishing and malware URLs
- ▶ Real time monitoring of Internet data traffic (incoming and outgoing), monitoring of HTTP and FTP connections (combined version)
- ▶ Quarantine for isolating suspicious files
- ▶ Simple installation and configuration of the security environment to be protected via the Avira SmallBusiness Suite configuration assistants.
- ▶ Individual configuration at the user level
- ▶ Permanent examination of the product and module status – irregularities and deviations from the norm are reported immediately
- ▶ Central control of scans and updates as well as network-wide administration with the Avira AntiVir Security Management Center (SMC)
- ▶ Planning / automation of routine tasks (test runs, updates) for the entire security environment
- ▶ Event manager for direct monitoring of the current system security level
- ▶ Comprehensive notification and reporting functions with freely definable rules
- ▶ User management including password and general / group-based rights allocation
- ▶ SSL-encrypted connections between SMC and administered computers
- ▶ Extremely small, bandwidth-saving updates of the detection pattern database and program
- ▶ Optional automatic update of all core components and all product packages via the SMC-integrated Internet Update Manager. Freely definable update intervals and test mode for preliminary testing of updates

The Avira SmallBusiness Suite. So much is certain:

Optimal protection

- ▶ Integrated cross-platform all-around protection against malware and spam
- ▶ Avira's reliable and proven state-of-the-art technology with leading detection rates that have received multiple awards
- ▶ Avira reacts quickly to new dangers with its own malware research center

Low cost of ownership

- ▶ Extremely efficient administration with working processes that can be automated as well as central management
- ▶ Intuitive operation without a steep and expensive learning curve
- ▶ All licenses include free updates, upgrades, and installation support

Easy installation and management

- ▶ Problem-free integration into your IT architecture and simple arrangement of the security environment
- ▶ Complete solution with central installation, configuration, and monitoring including updates of all components
