

Cybereason Endpoint Controls

SECURELY MANAGE THE ENDPOINT

KEY BENEFITS

Administer Endpoint Controls and security policies within the same user interface as Cybereason Prevention and EDR

Address access and data compliance requirements across all endpoints

Audit disk encryption at both the macro and micro endpoint level

Proactive Protection

87% of organizations* see risk management as a siloed, reactive process rather than an organization-wide, proactive function. Enforcing important risk-reduction policies in today's interconnected world of near continuous cyberattacks is difficult and can be costly in both currency and staff needed to defend today's enterprises.

Every business needs security solutions that have a minimal impact on performance, and at the same time, audit disk encryption policies and regulations. By having such security solutions in place your enterprise can manage inevitable human error and address complex compliance requirements.

Satisfy Security Policy Requirements

With Cybereason Endpoint Controls, you can manage specific controls tied to different types of devices, implement personal firewall policies, and conduct disk encryption audits. These features help your enterprise satisfy security requirements

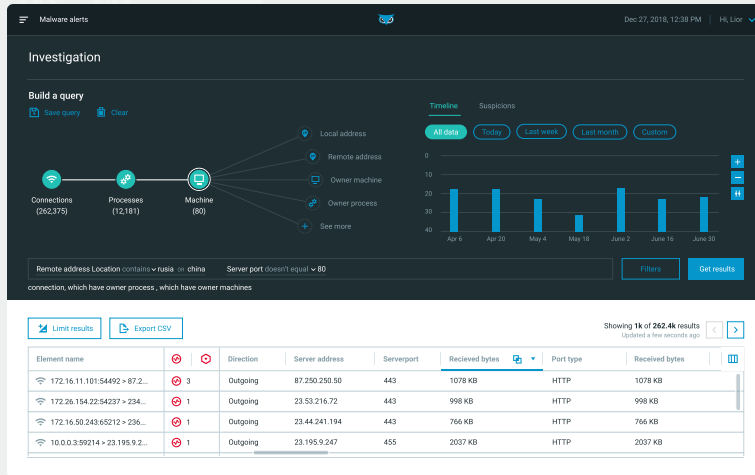

and address compliance needs. They also restrict access and encrypt data on devices, so you can better protect sensitive data in the case of an incident.

Centralize Security Policy Enforcement

Many organizations struggle to manage multiple tools for tasks that should be combined into a single user interface. The administrative overhead to implement device controls, personal firewalls, and audit disk encryption for a large endpoint infrastructure can be daunting when you have to juggle multiple administrative screens.

With Cybereason Endpoint Controls, you can log in to a single administrative screen or a complete, easy-to-scan view of device controls, personal firewalls, and disk encryption across each of your endpoints. All of these management capabilities come as part of the same agent used for Cybereason NGAV and EDR, so you can keep performance high and IT complexity low.

Enable Your Future Growth

Cybereason Endpoint Controls leverage the same lightweight agent as Cybereason NGAV and EDR. When your team is ready, upgrade your security stack quickly and easily right on the Cybereason Defense Platform without creating unnecessary IT complexity or performance issues.

“ [We are] able to isolate a device in seconds and re-enable the network communication just as quick.”

SECURITY AND RISK MANAGEMENT OFFICER
GOVERNMENT AGENCY

ADDRESS COMPLIANCE & BUILD TOWARDS FUTURE GROWTH

- Audit disk encryption policies
- Address compliance requirements
- Control all endpoints from one screen
- Easily improve your security & risk posture

ABOUT CYBEREASON

Cybereason is the XDR company, partnering with Defenders to end attacks at the endpoint, in the cloud and across the entire enterprise ecosystem. Only the Cybereason Defense Platform provides predictive prevention, detection and response that is undefeated against modern ransomware and advanced attack techniques. The Cybereason MalOp™ instantly delivers context-rich attack intelligence across every affected device, user, and system with unparalleled speed and accuracy. Cybereason turns threat data into actionable decisions at the speed of business. Cybereason is a privately held international company headquartered in Boston with customers in more than 40 countries.
